1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, and 20-21, drawn to a method for making a semiconductor device, classified in class 438, subclass 3 (+).
 - II. Claims 19, and 22, drawn to a semiconductor device, classified in class 257, subclass 1 (+).

The inventions are distinct, each from the other because of the following reasons:

The product as claimed could be made by a materially different process such as one, which uses a lift-off process in combination with a patterned mask to form the patterned memory cells instead of the etching process, which is specifically recited by the applicant for forming the different sized memory cells on the device.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Should the applicant elect the method claims for prosecution on the merits, further election of species is required as detailed below.

This application contains claims directed to the following patentably distinct species of the claimed invention:

- 1.) a hardmask is used as an etch mask (i.e.-claims 2-3);
- 2.) a photo resist etch mask is used as an etch mask (i.e.-claim 4);
- 3.) an isotropic rie etching step is used (i.e.-claim 13); and
- 4.) an anisotropic rie etching step is used (i.e.-claim 12)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. (Applicant may elect one of species 1 or 2, and one of species 3 or 4).

Currently, claims 1, 5-11, 14-18, and 20-21 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
